Walk 17 Kríni-Lákones-Paleokastrítsa-Lákones-Vístonas-Makrádes-Kríni . . . . .	37

### INTRODUCTION

Please note that unless described otherwise, all these routes were in reasonable condition at the time of writing, but this situation can change quickly in an area of sometimes violent weather – not to mention the locals' fondness for bulldozers. When it rains in Corfu, it can rain extremely heavily, turning dry or trickling stream beds into temporarily impassable torrents, disrupting paths, turning dirt tracks into deep mud, and causing sections (sometimes very large) of the clay hillsides to slide downwards. Most paths have at least some loose stones, and the steeper ones may be unsuitable for the less agile. Written for the active walker, none of the walks are intended as a light stroll or are suitable for someone with, for example, dodgy ankles, bad knees or a serious weight or health problem.
